

Thick Stock Pumps

Thick Stock Pumps are important pieces of equipment. Their reliability and performance are critical factors in the transportation of brown stock and bleached pulp with widely varying consistencies.

Tristar rebuilds and manufactures all popular models and sizes of Thick Stock Pumps.

Every unit is:

- Disassembled for inspection and N.D.T. testing
- Photographed and inspected
- All parts evaluated to establish scope of work

Tristar issues a condition report complete with options, repair recommendations and quotation.

At **Tristar**, a dedicated project engineer follows your Thick Stock Pump throughout the entire process with:

- Quality workmanship
- On budget projects
- On time delivery
- Access to support
- Repeatable and improved results

Tristar also services a variety of low and high pressure feeders, mixers and other equipment in your mechanical and chemical pulping fibre lines.

Many modifications and enhancements have been designed and are offered in our pump rebuilds to assist mills increase production capacity and operational life of pump.

Quality Service

Tristar manufactures a wide range of thick stock pumps and offers a comprehensive supply of spare parts.

Tristar operates an exchange program with units available for immediate shipment on all popular sizes of thick stock pumps.
