

Top Separator Screw & Basket

The top separator screw and basket are extremely important in your pulping process. Their function is to transport fibre into the cooking process. Through normal operation, wear will occur which require screw and basket to be changed at predetermined intervals.

Tristar has repaired and manufactured each size and model of top separator screw and basket. Tristar incorporates the latest designs and welding techniques to provide the highest quality.

Overall life and durability of these products has been improved by Tristar's engineering and product development achievements.

Tristar offers:

- Standard screen basket design
 - New-style Profile Bars
- For basket sizes #4, #5 and #6.

At Tristar, a dedicated project engineer follows your Top Separator Screw and Basket throughout the entire process to ensure:

- Quality workmanship
- Work scope conformance
- On time delivery
- Access to support
- Repeatable and improved results

Tristar also services a variety of low and high pressure feeders, mixers, thick stock pumps and other equipment in your mechanical and chemical pulping fiber lines, and manufactures a complete range of steaming vessel screws.

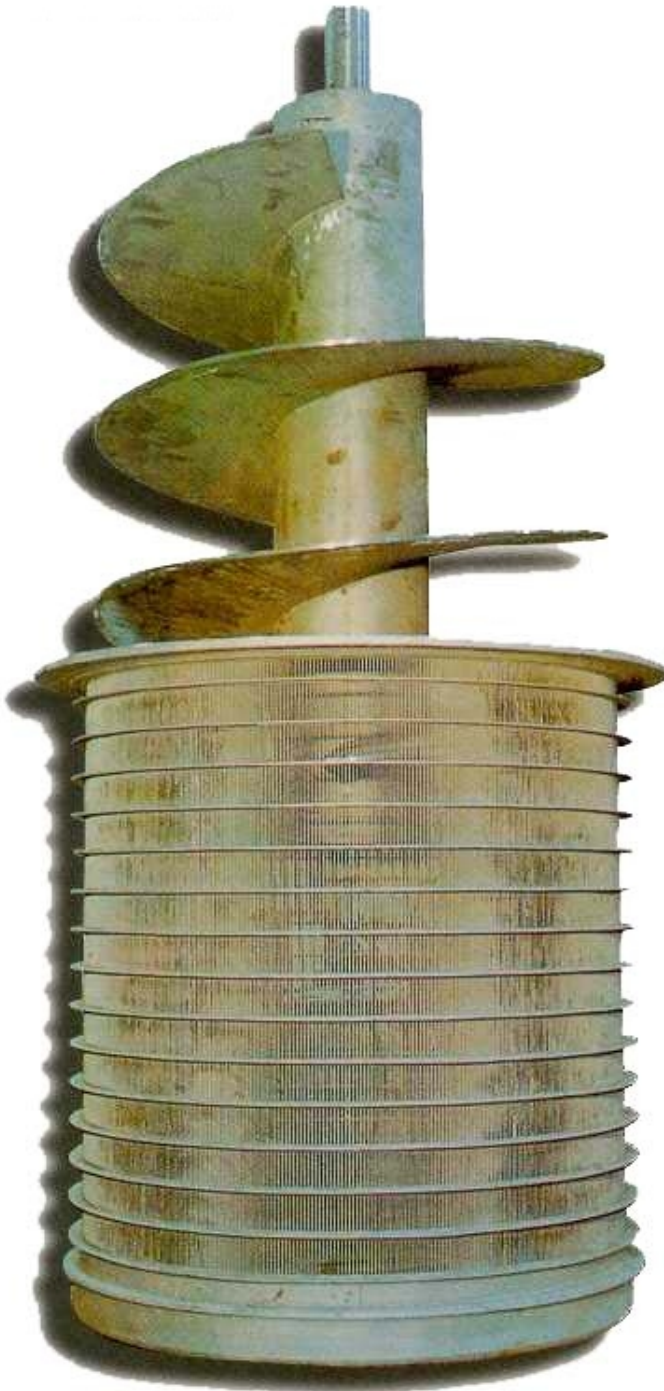

Quality Service

All welding is to
ASME specification.

Basic Designs:

- Standard Screen Basket
- New Style Profile Bars
